RECOMMENDATIONS FOR TREATMENT OF PRIMARY SNORING

4.1 We recommend that sleep physicians prescribe oral appliances, rather than no therapy, for adult patients who request treatment of primary snoring (without obstructive sleep apnea).

QUALITY OF EVIDENCE

- ⚫⚫⚫⚫ High
- ⚫⚫⚫⚫ Moderate
- ⚫⚫⚫ Low
- ⚫⚫ Very Low

BENEFITS VERSUS HARMs

- B>h Benefits outweigh harms
- B=H Benefits approximately equal harms
- H>b Harms outweigh benefits

RECOMMENDATIONS FOR TREATMENT OF OSA

4.2a When oral appliance therapy is prescribed by a sleep physician for an adult patient with obstructive sleep apnea, we suggest that a qualified dentist use a custom, titratable appliance over non-custom oral devices.

4.2b We recommend that sleep physicians consider prescription of oral appliances, rather than no treatment, for adult patients with obstructive sleep apnea who are intolerant of CPAP therapy or prefer alternate therapy.

4.2c We suggest that qualified dentists provide oversight—rather than no follow up—of oral appliance therapy in adult patients with obstructive sleep apnea, to survey for dental-related side effects or occlusal changes and reduce their incidence.

4.2d We suggest that sleep physicians conduct follow-up sleep testing to improve or confirm treatment efficacy, rather than conduct follow-up without sleep testing, for patients fitted with oral appliances.

4.2e We suggest that sleep physicians and qualified dentists instruct adult patients treated with oral appliances for obstructive sleep apnea to return for periodic office visits—as opposed to no follow-up—with a qualified dentist and a sleep physician.
